

Practical Week 7

1. Write a program that prints the addresses of code, global, static, heap, and stack variables. Analyze the Linux process address space layout and explain each memory segment.

```
root@DUDDUKURIs  x  +  v
GNU nano 8.7.1      src/memory_addresses.c *
#include <stdio.h>
#include <stdlib.h>

int global_var = 10;
static int static_var = 20;

void code_function() {
    printf("Code address    : %p\n", (void *)code_function);
}

int main() {
    int stack_var = 30;
    int *heap_var = malloc(sizeof(int));

    *heap_var = 40;

    printf("Memory Addresses\n");
    printf("-----\n");

    code_function();

    printf("Global address : %p\n", (void *)&global_var);
    printf("Static address : %p\n", (void *)&static_var);
    printf("Heap address  : %p\n", (void *)heap_var);
    printf("Stack address : %p\n", (void *)&stack_var);

    free(heap_var);

    return 0;
}
```

Output:

```
root@DUDDUKURIs  x  +  v  -  □  X
root@DUDDUKURIs:~$ cd ~/OS_Skill
mkdir -p Week-7/src Week-7/bin
cd Week-7
root@DUDDUKURIs:~/OS_Skill/Week-7$ nano src/memory_addresses
.c
root@DUDDUKURIs:~/OS_Skill/Week-7$ gcc src/memory_addresses.
c -o bin/memory_addresses
root@DUDDUKURIs:~/OS_Skill/Week-7$ ./bin/memory_addresses

2. Make use of the /proc//maps file and memory analysis tools to study the memory organization of a running process. Prepare a report explaining virtual memory mappings.

```

root@DUDDUKURIs  x  +  v  -  □  x
GNU nano 8.7.1      src/memory_maps.c *
#include <stdio.h>
#include <stdlib.h>
#include <unistd.h>

int global_var = 100;

int main() {
    int stack_var = 200;

    int *heap_var = malloc(sizeof(int));
    *heap_var = 300;

    printf("Process PID: %d\n", getpid());
    printf("Global address: %p\n", (void *)&global_var);
    printf("Stack address : %p\n", (void *)&stack_var);
    printf("Heap address  : %p\n", (void *)heap_var);

    printf("\nProcess is running...\n");
    printf("Use another terminal to inspect /proc/%d/maps\n", getpid());

    while (1) {
        sleep(1);
    }

    free(heap_var);

    return 0;
}

```

Output:

```
